Lab Objective

Example Playbook

1 Create Domain User

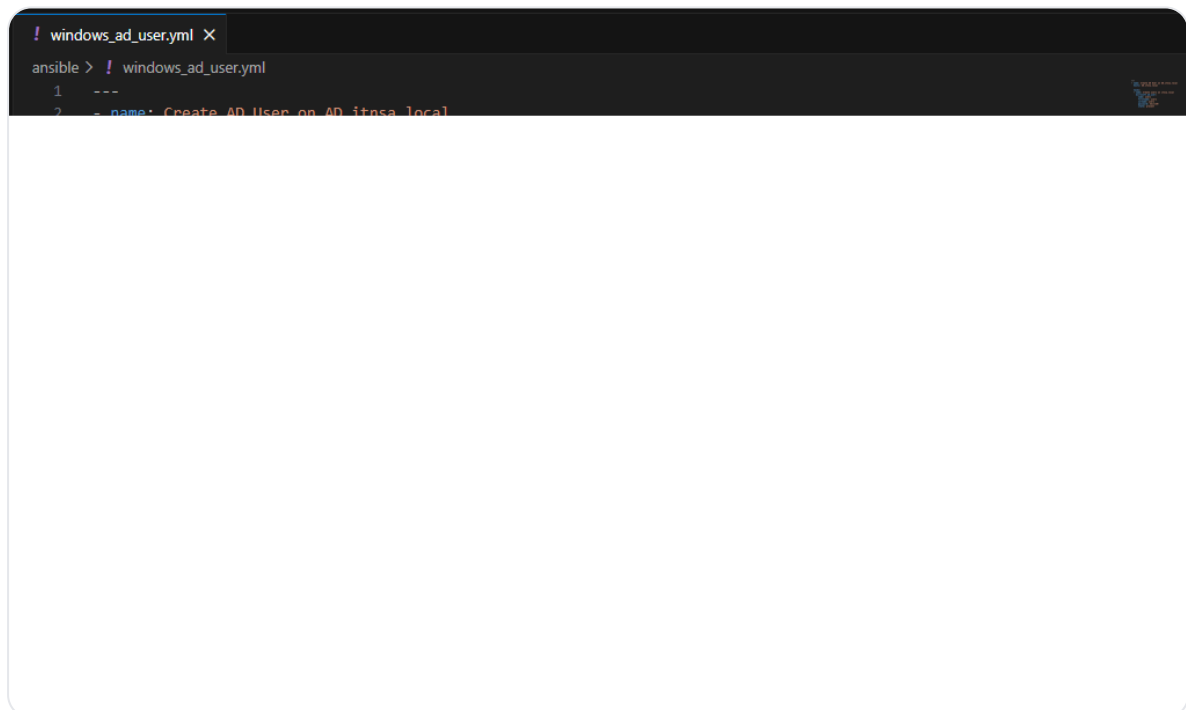

Pada **CLIENT.itnsa.local** buka Visual Studio Code

Buat playbook bernama `windows_ad_user.yml` dengan konten berikut:

```
---
- name: Create AD User on AD.itnsa.local
  hosts: AD.itnsa.local

  tasks:
    - name: Create user1 on itnsa.local
      microsoft.ad.user:
        name: user1
        firstname: user1
        surname: user1
        password: Skill39!
        state: present
```

Contoh eksekusi:

```
! windows_ad_user.yml X
ansible > ! windows_ad_user.yml
1 ---
2 - name: Create AD User on AD.itnsa.local
```

2 Create DNS Record

Buat playbook bernama `windows_dns.yml` dengan konten berikut:

```
---
- name: Create DNS record on itnsa.local
  hosts: AD.itnsa.local

  tasks:
  - name: Create "ansible" A record
    community.windows.win_dns_record:
      name: "ansible"
      type: "A"
      value: "192.168.1.1"
      zone: "itnsa.local"
```

Contoh eksekusi:

3

Create IIS Website

Buat playbook bernama `windows_iis_website.yml` dengan konten berikut:

```
---
- name: Create IIS website on itnsa.local
  hosts: AD.itnsa.local

  tasks:
  - name: Install IIS feature
    win_feature:
      path: web-server
      state: present
      include_management_tools: true
  - name: Create root directory first
    win_file:
      path: 'C:\website\ansible'
      state: directory
  - name: Create index.html
    community.windows.win_lineinfile:
      path: 'C:\website\ansible\index.html'
      line: 'Created by ansible!'
      create: yes
  - name: Create IIS website
    community.windows.win_iis_website:
      name: Ansible
      state: started
      port: 80
      ip: '*'
      hostname: ansible.itnsa.local
      application_pool: DefaultAppPool
      physical_path: 'C:\website\ansible'
```
