Lab Objective

Lab Directory Services - AD Fine-grained

1 Create Password Policy

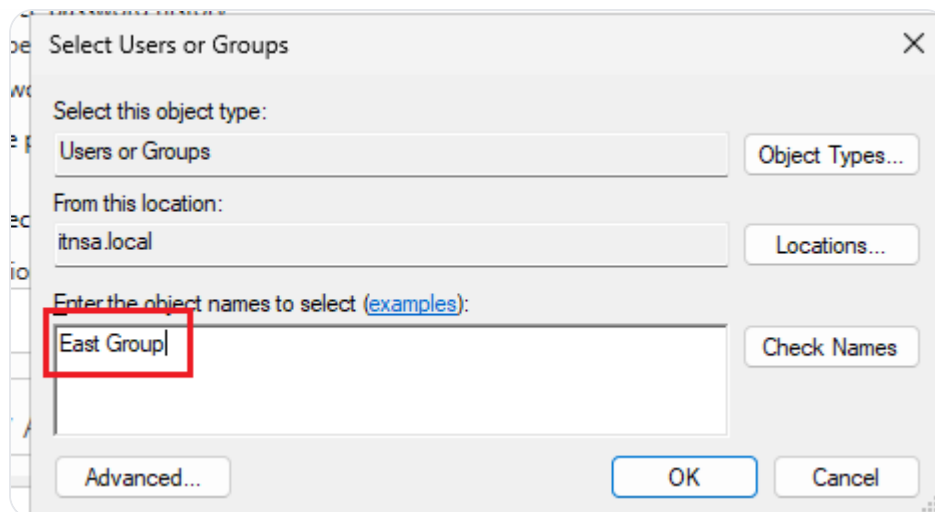

Buka **Active Directory Administrative Center** dsac.exe , lalu menuju buat password policy bernama **East Policy** dengan ketentuan berikut:

The screenshot shows the configuration for a password policy named 'East Policy'. The 'Name' field is 'East Policy' and 'Precedence' is '1'. The 'Enforce minimum password length' checkbox is checked, with a value of '7' for 'Minimum password length (characters)'. The 'Enforce password history' checkbox is unchecked, with a value of '24' for 'Number of passwords remembered'. The 'Password must meet complexity requirements' checkbox is unchecked. The 'Store password using reversible encryption' checkbox is unchecked. The 'Protect from accidental deletion' checkbox is checked. The 'Description' field is empty. The 'Password age options' section shows 'Enforce minimum password age' unchecked, 'Enforce maximum password age' checked with a value of '42', and 'Enforce account lockout policy' unchecked. The 'Number of failed logon attempts allowed' is '30', and 'Reset failed logon attempts count after (m...)' is '30'. The 'Account will be locked out' section has 'For a duration of (mins):' selected with a value of '30', and 'Until an administrator manually unlocks the account' is unselected.

- Non-aktifkan **Password History**
- Non-aktifkan **Password Complexity Requirements**
- Non-aktifkan **Minimum Password Age**

Setelah itu, pilih **Add** dan tambahkan **East Group**

Terakhir pilih **OK**

2 Testing Password Policy

Gunakan perintah `net user` seperti contoh dibawah ini untuk menguji password policy

```
PS C:\Users\Administrator> net user est1 password /domain
The command completed successfully.

PS C:\Users\Administrator> net user wst1 password /domain
The password does not meet the password policy requirements. Check the minimum password length, password complexity and password history requirements.
```

- Password user **est1** berhasil diganti menjadi password karena pada password policy telah dinonaktifkan **Password Complexity**
- Sedangkan password user **wst1** tidak bisa diganti menjadi password karena secara default terdapat default password policy yang mengharuskan password bersifat kompleks.
